

CEN/TC250/SC7 meeting at BICC June 2022 – European Technical Committee on Eurocode standards.

Eurocode 7 – Geotechnical Design meeting at BICC in Malta.

The Committee meeting in Malta between 15 and 17th June 2022 forms part of the European Technical Committee on Eurocode standards. These technical standards are developed by CEN the European Standardisation Organisation and adopted by all member states as harmonised

standards across the EU. They define various aspects of the safety of structural building design and include wind and thermal actions on structures; design of structural elements in concrete, steel, composite steel and concrete, timber, masonry and aluminium; together with geotechnical and seismic design. The

committee meeting in Malta focuses on the geotechnical aspects of the design of buildings and other civil engineering works. During its meetings considerations on matters related to the execution and workmanship of ground investigations and testing will be discussed and agreed upon to be included in Eurocode standards.
